

# G2P Connect: Open Source Module Profiles

*Mojaloop Foundation*

## Stated Objective:

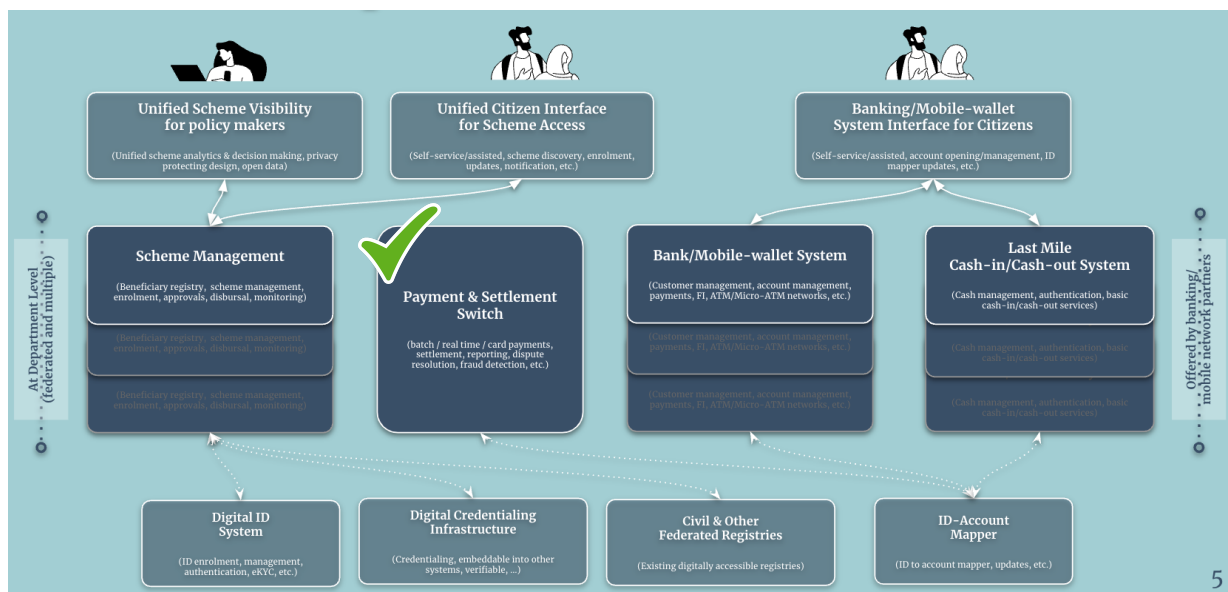

Our mission is to increase financial inclusion by empowering organizations creating interoperable payments systems to enable digital financial services for all.

To achieve our mission, Mojaloop Foundation is a 501(c)(3) charitable nonprofit and maintains its free, open source software and community as a public good in service of financial inclusion.

## Designed By:

Mojaloop Foundation Product Management with support from Mojaloop Core Development Community members and implementers.

## Scope/Functions:

## Technical Features and Capabilities Summary:

Mojaloop is open source software that serves as a reference model for creating interoperable payments platforms connecting all digital financial providers and customers, especially the financially excluded. Rather than a financial product or application in itself, Mojaloop's open source blueprint will remove barriers—including time, money and technical complexity—that have hindered payment models from meeting the digital financial needs of the world's 1.7 billion unbanked people.

**Current and Planned Deployments:** Deployment information is provided upon approval of the implementing entity. Contact Steve Haley for more information

**Interoperability Status with other G2P Connect Building Blocks:** Mojaloop is interoperable with MOSIP, OpenG2P and Mifos and have developed relationships and support within the community to expand and improve the interoperability. Complete interoperability with all other G2P Connect blocks as of December 15<sup>th</sup>, 2022.
