

G2P Connect: Open Source Module Profiles

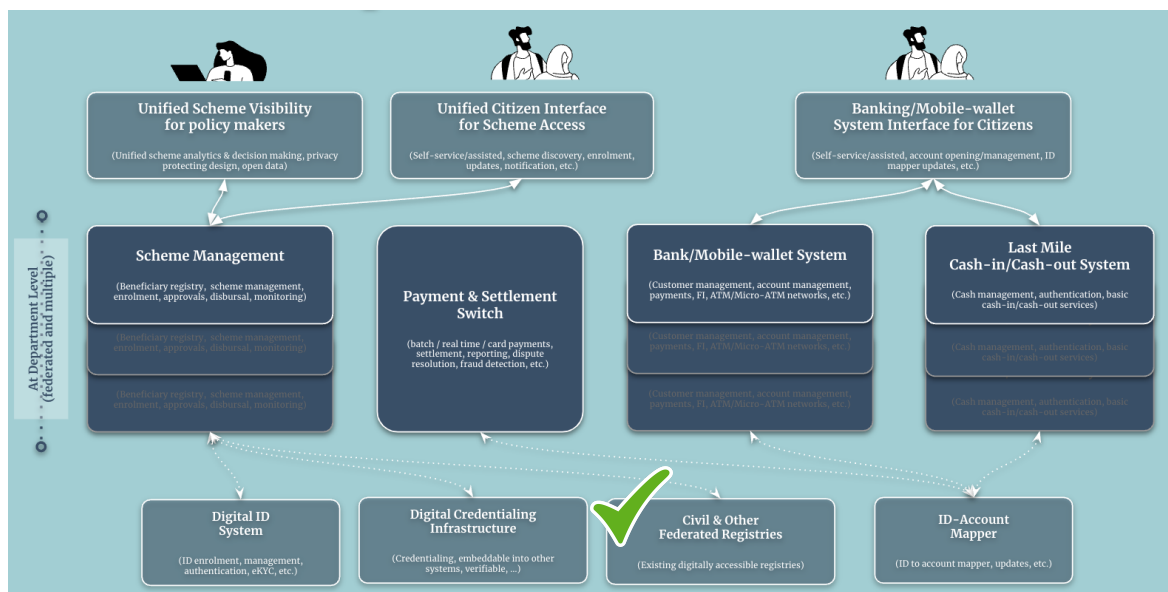

Open CRVS

Stated Objective:

OpenCRVS aims to make civil registration easy so that all people can be recognised, protected and provided for from birth.

Designed By: OpenCRVS Limited

Scope/Functions: Civil Registration and Vital Statistics

Technical Features and Capabilities Summary: OpenCRVS is a highly configurable, interoperable and secure DPG for civil registration, making it ideally suited for use at scale in low resource settings. It uses standards-based and proven technologies to provide highly secure registration services that respond to common challenges, including deduplication of records, audit trails, offline capability, multi-language support and performance management features.

Current and Planned Deployments:

Niue - Proof of Concept (2021)

Nigeria - National Population Commission, Pilot Deployment (2022)

Cameroon - MINDDEVEL / BUNEC (2023)

Madagascar - Unité de Gouvernance Digitale, Proof of Concept, [2022]

Mauritius - Government of Mauritius [2023]

Interoperability Status with other G2P Connect Building Blocks:

Technical interoperability with MOSIP as of Aug 2022

Complete interoperability with OpenG2P, OpenSPP, Core MIS by Dec 2022
